

# Pharmacy 2000™ Workflow Software and FlexCheck® Remote Verification

Ensure safety and efficiency from prescriber to patient with Pharmacy 2000 workflow software and FlexCheck remote verification.

Developed in close partnership with pharmacists, Pharmacy 2000 workflow software introduces order, logic and controls into even the busiest pharmacies to help manage prescriptions with safety and efficiency.

#### Maximize your pharmacy's efficiency.

Pharmacy 2000 simplifies your fulfillment process, reducing the number of steps to fill a prescription and eliminating unnecessary interactions with software.

By creating distinct workstations for entering, filling and verifying prescriptions, Pharmacy 2000 allows users to perform tasks concurrently. You can also ensure you have the right people performing the right roles and tasks with customized user authentication management.

To maximize efficiency during pharmacist verification, Pharmacy 2000 consolidates orders with multiple prescriptions, so you check everything at once.

#### Put safety first.

With fewer steps, there are fewer opportunities for errors. Pharmacy 2000 creates a systematic process that extends safety and accuracy across your entire prescription volume. Through barcode scanning, pill imaging and user authentication, Pharmacy 2000 ensures accuracy for every prescription.

#### Track prescriptions in real time.

Pharmacy 2000 tracks and reports on all user activities, giving your team visibility to the status and location of each prescription in real time.

#### Go paperless for smooth processing and reporting.

Pharmacy 2000 reduces clutter and confusion in the pharmacy with streamlined paperless processing. Easily image hard copy prescriptions to handle them digitally, and access electronic records when you need to review them or generate reports.

#### Expect easy integration.

Pharmacy 2000 interfaces with your pharmacy management system and off-the-shelf hardware for smooth installation and maximum cost savings.

And as the only workflow solution that is fully integrated with Parata Max® and Parata Mini® automated dispensers, Pharmacy 2000 reduces manual barcode scan, improves safety and saves time.

#### Connect pharmacy sites with FlexCheck.

Any Pharmacy 2000 workstation can be equipped with the FlexCheck remote verification application to connect remote pharmacy users and sites. This highly efficient solution requires little hardware and works in any size pharmacy.

FlexCheck's one-touch photo capturing device images prescriptions and sends the images to a remote pharmacist for review and verification. The remote pharmacist can also use the collaborative notes tool, web camera or phone to communicate with team members or the patient for a consultation.

#### Trust in a secure solution.

Parata maintains certification through the Department of Defense's stringent Information Assurance Certification and Accreditation Process (DIACAP). When you choose Parata technology, you can trust that your information systems and patient data are always secure.
