

Parata Pivot™ Workflow Software for PASS

Got multiple PASS units?
The Parata Pivot software platform is designed just for you.
Pivot integrates individual Parata PASS packagers as one
to simplify and streamline your operation.

Amplify Your Throughput

Pharmacies using Parata Pivot have increased the daily throughput of each Parata PASS packager by as much as 50 percent. Basically, two packagers can do the job of three.

Optimize Batch Routing

Pivot tackles complex calculations to recommend the optimal PASS for each batch. It looks at where the needed canisters are and how to minimize trays across all batches, and all packagers.

Use Fewer Trays

By using your canisters more efficiently, Pivot can reduce special tablet tray (STS) use by more than 25 percent. That means fewer manual steps and less opportunity for error.

Balance Your Workload

This boost in efficiency is possible because Pivot balances the workload across your fleet of packagers and reduces the time your team spends preparing a packager for a batch, allowing time for business growth.

Better Manage Your Inventory

With Parata Pivot, you can share canisters – and their data – across multiple PASS units. This centralizes your inventory and reduces the number of canisters you need by an average of 30 percent.

Generate Global Reporting

Parata Pivot centralizes the PASS data so you can gain powerful insights into your inventory and your operations – all reports, all machines, one place.

Parata Pivot Server Specs

Dell Server, choice of tower or rack-mounted

- RAID 5, H330/H730/H730P for SAS/SATA
- Integrated RAID controller
- Intel Xeon E3-1220 v5 3.0GHz, 8M cache, 4C/4T, turbo (80W) (338-BIJF)
- 16GB UDIMM 2133MT/s
- 2TB mirrored Hard Drives
- Dual, Hot Plug, redundant Power Supply
- NEMA 5/15P to C13 Wall Plug, 125 Volt, 15 AMP, 10 Feet Power Cord

Operating System

Windows Server 2012 R2, 64-bit

Database

Microsoft SQL Server Standard Edition 2014
