

Parata Check PASS™ Visual Inspection Aide

There's a faster, safer way for pharmacies to verify Parata PASS strip packaging.

Pharmacies using Parata PASS strip packaging often choose the packaging as a tool to differentiate and grow their businesses and increase their prescription volume.

When they need to streamline the verification process to keep up, they turn to Parata Check PASS: a high-speed, high-accuracy visual inspection aide that efficiently and safely identifies the contents of each pouch.

Put safety first.

Parata Check PASS scans each pouch for pill quantity, size and shape. It reads a barcode printed on each pouch and compares the contents with batch information from the PASS packager.¹ If something doesn't match — the number of pills or the size and shape of a tablet — Check PASS flags the pouch for a pharmacist's inspection. It continues inspecting other pouches and generates a report of pouches flagged for exceptions for review by a pharmacist.

Check PASS also has the ability to use color as an additional inspection parameter. Because lighting varies from pharmacy to pharmacy, pills must be imaged for color and added to the Check PASS database in your pharmacy.

Ensure accuracy — consistently.

Studies show even most skilled pharmacists' ability to accurately inspect prescriptions declines as time, volume and distractions increase. Immune to these pressures, Check PASS ensures accuracy around the clock for safer, faster inspection.

Maximize your efficiency.

Check PASS identifies pouches that need close attention from a pharmacist by batch, so they can be reviewed at one time. This creates a clean, predictable workflow for pharmacist verification and gives pharmacists more time for patient counseling and other responsibilities.

Keep picture-perfect records.

Check PASS captures and saves an image of every pouch it inspects, so you always have a visual record of each pouch's label and contents. The image is viewable within the Check PASS software for 30 days. After 30 days, archived images can easily be retrieved for review.

Get started quickly.

With Parata Check PASS, you can expect a quick addition to your pharmacy and processes. Its small footprint makes finding the right location in your pharmacy easy, and its interface with Parata PASS makes it feel familiar right away.

Other inspection systems require extensive set up. Our pill image library contains inspection parameters for more than 6,000 NDCs, giving you a head start on your formulary. And you can quickly and easily add new drugs to the database right in your pharmacy.

Parata Check PASS™ Visual Inspection Aide

PRODUCT DIMENSIONS

Height (inches)	70.9
Width (inches)	39
Depth (inches)	26.4
Weight (pounds)	770

SPACE REQUIREMENTS

The following space requirements will help you determine where to install Parata Check PASS in your pharmacy.

TOTAL SPACE REQUIREMENTS: 61" X 70.4"

ELECTRICAL REQUIREMENTS

- One dedicated outlet within 5.5 feet of unit
- 120V, 2.5A circuit, 60H

1 Inspection accuracy is dependent on the entire process of ensuring correct pills in the packaging and the technology limitations on differentiating pills that are within the algorithm tolerances for shape, size and color.
