

Parata PharmLoc™

AT-RISK-MED SECURELY CONTROLLED

Secure Inventory Management

- Limit access to CII and At-Risk-Medications and reduce your liability
- Compared to key lock cabinets, PharmLoc is always locked and no hunting for keys or waiting
- Software controlled electronic locks
- Users must be enrolled to access an At-Risk-Medication (ARM) location
- User authentication to access ARM locations by biometric fingerprint, scanning a user token that is printed when they log in, or typing user name and password
- ARM is determined by each pharmacy - can be CII's, or all controlled medications, and expensive non-controlled medications
- Utilizes Beacon High-Density (HD) drawers - configurable for a few drawers to the entire cabinet
- Integrated into existing Beacon workflow
- Identifies ARM location with Beacon's light-guided, barcode-driven technology
- Optional red light and horn alerts the pharmacy when a user leaves a drawer open
- Count verification settings are configurable - verify count, blind count, always, random, or no count for each ARM
- Automatic emails feature with verify count or blind count is different than source quantity

LED Light-Guided Technology to find the right prescriptions every time

Drawer front

Parata PharmLoc™

AT-RISK-MED SECURELY CONTROLLED

Function	Specifications
Size	34.5" W × 66" H x 42.3" D
